ADDING CONTENT TO A WEBPAGE USING HTML MARKUP

Adding Content to a Webpage

Most of a webpage's content will go inside the**<body>** element, for example:

* Headline text (using header elements **<h1>** through **<h6>**).

* Standard text (using **<p>** elements).

* Hyperlinked text (using **<a>** elements).

* Lists (using ** or ** plus **<li>** elements).

* Images (using **<img>** elements).

Let's take a quick look at each.

To Add Headline Text

Put your desired text between the opening and closing headline tags.

Example: **<h1>Jojo's Philosophical Musings</h1>**

To Add Standard Text

Put your desired text between the opening and closing paragraph tags.

Example: **<p>Hi. I am Jojo Bird, a student, a philosopher, and above all a kind and curious soul. This blog is an account of my daily musings.</p>**

To Add Hyperlinked Text

» Put your desired text between the opening and closing anchor tags.

» Include a hypertext reference (**href**) within the opening anchor tag.

» If you want the destination site to open in a new browser tab or window, add**'target=_blank"** as well.

Example: **My favorite philosophy book.**

To Add a List

» Put your desired text between the opening and closing list tags (**<ul>** for unordered lists, **<ol>**for ordered ones).

» Put each list item in list item tags.

Example:

<ul>
**
Musing: Is there another word for synonym?
**
**
Musing: If time is money, is an ATM a time machine?
**
**
Musing: If someone made a movie about Morgan Freeman, who would narrate it?
**
**
Musing: If Transformers were real and living among us, would they buy life insurance or car insurance?
**
**
**

To Add an Image

1. Put the URL of your image within an image tag (**<img>**).
2. Include alt text (alt="add your alt text here").

3. Set the width and height in pixels as appropriate by adding width="x" and height="y".

Example: ****
